INTERNAL RELEASE

UltraRestoreX

iBootX Completely Re-written & Optimised For Stability & Flexibility

A Few Comments From The DuffyAPP_IT Community

“I never thought I’d see the day to be able to downgrade your favourite iDevices in just one simple click.. The community is awesome and the main man James, is as kind as you think a good dev would be !”

A Few Comments From The DuffyAPP_IT Community

“it was really nice to see the progress that was made by the community and the enthusiasm that many brought to the Slack!”

A Few Comments From The DuffyAPP_IT Community

“Amazing team and incredible work space!”

A Few Comments From The DuffyAPP_IT Community

“Community is absolutely awesome, and I really like it! Projects are really cool too.”

So, What Have We Done?

DiagBootX

Released. Open Source. Improvements Coming.

- DiagBootX is designed to automate the process of booting unsigned images on the iPhone, on all checkm8 vulnerable devices.
- DiagBootX achieved this, and has been released as open source software on the **DuffyAPP-IT** GitHub.
- I'm working on some extra features, like automatic iBSS and iBEC patching for your devices, and a scripting language to interact with DIAGS in an easy, automatic fashion where the values to set will be stored in a 'configuration file' and applied upon boot.

iBootX

Limited Current Support. CLI Based. Development In Progress.

- In the past few weeks, we've made absolutely massive progress, building the community, and developing iBootX.
- The original code was limited in some sense, as I was originally developing it as a personal project just for me and a friend.
- As of now, the code supports devices currently running iOS 12 or below. Development is in progress and we are testing different implementations in order to support iOS 13.

UltraRestoreX - #urX

iBootX Completely Re-written & Optimised For Stability & Flexibility

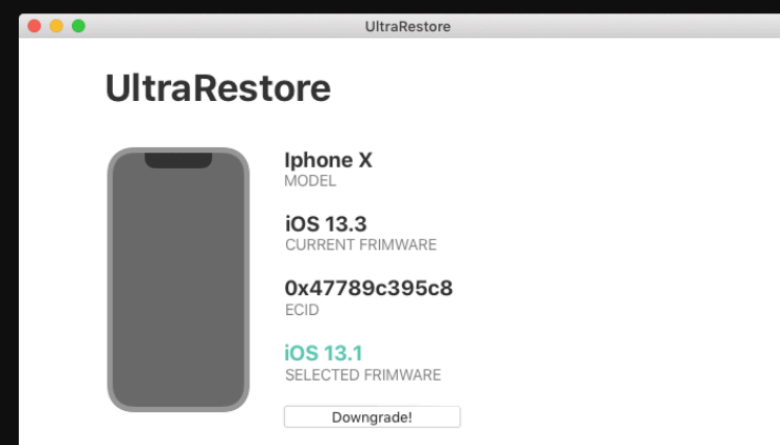

- In the past couple of weeks we've been working in the background, morning-til-night, rewriting the iBootX code and building something new.
- UltraRestoreX is a GUI based, one-click downgrade tool for all devices between iPhone 5S and the iPhone X.
- The new codebase is much more flexible than our previous codebase, with our in-house libraries for interacting with iOS devices in a flexible way, allowing us to update and improve UltraRestoreX with ease.

Ready to see it?

Ultra Restore

So, Where Are We Going?

We've Got A Few Things To Do ...Sorry!

- We are currently experimenting with a few different implementations of UltraRestoreX to ensure iOS 13 Compatibility.
- Once we are happy with the codebase, we will integrate the backend with the GUI, Open Source the project, and release it!

'I'd like to thank everybody. The community in Slack, Twitter, and other social media, for your continued support while we develop DuffyAPP_IT and our products. There's more coming, very very soon. Stay tuned ;)'
